DETAILED ACTION

This is in response to amendments filed on 4/16/08 in which claims 1-6 are pending. The applicant's amendments have been fully considered therefore this case is in condition for allowance. In addition the pending claims have been renumbered as 1-2, 5, 3, 6 and 4 respectively.

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: the prior arts of record fail to anticipate or render obvious the following recited features: a memory that stores said polyphase components from at least one polyphase cycle prior to the current polyphase cycle; a plurality of filters, each filter processing a plurality of said polyphase components stored in said memory to generate a filtered polyphase component corresponding to that filter, wherein in any given input polyphase cycle, at least one of said filters processes a plurality of different polyphase components stored in said memory from a corresponding polyphase cycle; and a multiplexer that outputs said filtered polyphase components in a predetermined order to generate a filtered output signal comprising an unconverted version of said input signal as recited in all the independent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
3. Wang U.S. Pub No 2003/0117201 A1 teaches a quadrature signal generation.
